

## PRESS RELEASE

The new CRC controllers with outdoor sensor predicts and evens out temperature changes. For increased comfort as well as for energy savings.

### NEW! CRC100

- **Outdoor based controller with integrated actuator.**
- **Set the perfect heat curve according to need.**
- **Easy and quick to install.**

## CONTROLLING FLOWS OF LIQUID HAS ALWAYS BEEN THE HEART OF BUSINESS AT ESBE.

And in our mind we've had thoughts on how to improve it for just as long. Our customers have grown accustomed to us providing them with highly functional and reliable products that are a joy to install.

With ever rising costs for energy and increased environmental concern a higher efficiency has also advanced on the wish list – without sacrificing comfort, of course.

Our line of electronic controllers are an answer to just that. A modern efficient controller range with that old school quality and reliability still on board.
