

LINEAR MOTORIZED VALVES

CONTROL VALVE PN16 SERIES SERIE VLA100

ESBE control valves series VLA100 are 2-way and 3-way internal threaded valves for PN16, DN 15-50.

VLA121
Internal thread PN16

VLA131
Internal thread PN16

MEDIA

These valves can handle the following types of media:

- Hot and cold water.
- Water with antifreeze additives such as glycol.

If the valve is used for media at temperatures below 0°C (32°F), it should be equipped with a stem heater in order to prevent ice formation on the valve stem.

OPTION

Adaptor kit _____ Siemens SQX, Art. No. 2600 07 00

CONTROL VALVE DESIGNED FOR

- Heating
- Comfort Cooling
- Floor heating
- Solar heating
- Ventilation
- District Heating
- District Cooling

SUITABLE ACTUATORS

- Series ALB140
- Series ALF13x
- Series ALF26x
- Series ALF36x

TECHNICAL DATA

Type: _____ 2- and 3-way plug valve
 Pressure class: _____ PN 16
 Flow characteristic A-AB: _____ EGM
 Flow characteristic B-AB: _____ Complementary
 Stroke: _____ 20 mm
 Rangeability K_v/K_v^{min} : _____ see graph
 Leakrate A-AB: _____ Tight sealing
 Leakrate B-AB: _____ Tight sealing
 ΔP_{max} : _____ see graph
 Media temperature: _____ max. +130°C
 _____ min. -20°C
 Connection: _____ Internal thread, EN 10226-1

Material

Body: _____ Nodular iron EN-JS 1030
 Stem: _____ Stainless steel SS 2346
 Plug: _____ Brass CW602N
 Seat: _____ Nodular iron EN-JS 1030
 Blind plug: _____ Brass CW602N
 Seat seal: _____ EPDM
 Packing box seal: _____ PTFE/EPDM

CE PED 2014/68/EU, article 4.3

Pressure drop limit where cavitation might occur. Is dependent of valve inlet pressure and temperature of water.

VALVE CHARACTERISTICS

2-way valves, DN15-50

3-way valves, DN15-50

* Kvs-value in m³/h at a pressure drop of 1 bar.

CONTROL VALVE PN16

SERIE SERIE VLA100

FLOW CHART

To be considered: As both the viscosity and the thermal conduction are affected when glycol is added to the system water, this fact has to be considered when dimensioning the valve. A good rule is to choose one size higher Kv-value when 30 - 50% glycol is added. A lower concentration of glycol may be disregarded. N.B.! Maximum 50% glycol for freezing protection and oxygen absorbing compounds are allowed as additives.

CONTROL VALVE PN16

SERIE SERIE VLA100

INSTALLATION

The valve should be mounted with flow direction in accordance with the valve marking.

If possible, the valve should be installed in the return pipe, in order to avoid exposing the actuator to high temperatures.

The valve must not be installed with the actuator mounted below the valve.

Mounting positions:

A = Allowed mounting position with fluid temperature between -20°C to $+120^{\circ}\text{C}$.

B = Allowed mounting position with fluid temperature between 0°C to $+150^{\circ}\text{C}$.

C = Not allowed mounting position.

To ensure that suspended solids will not become jammed between the valve plug and seat, a filter should be installed upstream of the valve, and the pipe system should be flushed before the valve is installed.

VALVE AUTHORITY [β]

Δp_v - pressure losses over the valve [bar]

Δp_{sys} - pressure losses over the system with variable flow [bar]

Δp_{inst} - pressure losses over the installation [bar]

Recommendation : Valve authority [β] shall be between 0.3 to 0.7

a) 2-way valve

$$\beta = \frac{\Delta p_v}{\Delta p_v + \Delta p_{inst}}$$

b) 3-way valve

$$\beta = \frac{\Delta p_v}{\Delta p_v + \Delta p_{sys}}$$

INSTALLATION EXAMPLES

2-WAY CONTROL VALVES

Installation without local circulating pump

Installation with local circulating pump

3-WAY CONTROL VALVES

Circuit without local circulation pump

Circuit with local circulation pump

Circuit with local circulating pump
