

CIRCULATION UNIT FIXED TEMPERATURE, SERIES GFA100

GFA111

GFA112

PRODUCT DESCRIPTION

The ESBE series GFA100 is a circulation mixing unit designed for heating circuits, where the constant temperature control is required. Equipped with two shut-off valves with thermometers, check valve, high class insulation shell and high efficiency circulation pump. The GFA100 is delivered with the 3-way thermostatic mixing valve for constant temperature control of the heating circuit. The thermostatic mixing valve has adjustable temperature setting.

SERVICE AND MAINTENANCE

The circulation unit does not require any specific maintenance under normal conditions.

DIMENSIONING, PUMP CAPACITY DIAGRAM

Example: Start with the heating demand of heating circuit (e.g. 25 kW) and move horizontally to the right in the diagram to the $\Delta t = 15^\circ\text{C}$ (temperature difference between flow and return of the heating circuit). Next go up and find working flow point and read the available pressure of the pump on the left - $\Delta p = 39 \text{ kPa}$.
