

THERMOSTATIC CONTROL UNITS

SOLAR KIT SERIES VMC300

The ESBE thermic solar kit series VMC300 offers dual functionality for tap water applications: It diverts incoming water when additional heating is needed and makes outgoing water scald safe*, all in an easy-to-install solar kit.

OPERATION

ESBE solar kit VMC300 offers optimized energy usage, scald protection and comfort in a compact and efficient way. Using only thermostatic components (non-electrical) the unit is completely independent and provides very easy installation.

Series VMC300 is intended for smaller solar heating systems.

FUNCTION

If the incoming water from the solar collector is not hot enough, it is diverted to an additional heat source, such as a gas boiler, and once it is heated it is mixed to a suitable temperature for domestic hot water applications. If the incoming water from the solar collector is already hot enough, it will be mixed directly for domestic hot water use, efficiently utilizing the solar energy.

*) Scald safe means that in the case of a cold water failure, the hot water supply shuts off automatically.
